

Ornamental Fish from all over the world

Mystus leucophasis (Formerly: *Heterobagrus leucophasis*)

The Upside-Down-Cat from the Congo (*Synodontis nigriventris*, see http://www.aquariumglaser.de/en/archiv.php?news_id=752) is known by

any aquarists child. But even experienced aquarists often don't know that in Asia (in Burma) also occurs an upside down swimming species: *Mystus leucophasis* which can attain a maximum length of about 30 cm, but is commonly found 15-20 cm long.

The schooling instinct in our bustling juveniles, which are currently 4-6 cm long and always quarreling, is that strong that it took a lot of patience to make a photo of a solitary swimming individual. From a length of about 8-10 cm on the currently mainly pitchblack fish develop snowwhite spots on the flanks.

For our customers: the animals have code 421492 on our stocklist. Please note that we exclusively supply the wholesale trade.
