

Ornamental Fish from all over the world

Ammocryptocharax elegans

There is probably no other species of freshwater fish that has such a bilious green coloration as it is shown by the 4-5 cm long ground characin *Ammocryptocharax elegans*. We were able to import a few specimens from Venezuela. However, one should know that these fish can change their coloration very fast and in case the fish are concerned they can become camouflage brown in a glimpse. One should keep these fish in planted aquaria, for field studies showed that they have their green colours only when they can sit on submerged plants.

For our customers: the fish have code 203752 on our stocklist. Please note that we exclusively supply the wholesale trade.

Kryptopterus macrocephalus

We received a shipment of very nice Striped Glass Catfish from Indonesia. The fish are currently about 5 cm long. Superficially the Glass cats resemble very much the species *Kryptopterus macrocephalus*, which can attain a maximum length of about 10 cm. However, there is one puzzling phenomenon: despite the small size of our fish they are sexually distinguishable already! The males are a bit smaller and much more slender than the females. So possibly our new importation represents a so far unknown dwarf species which resembles only *K. macrocephalus*? Who knows....

AQUARIUM GLASER GmbH

Ornamental Fish Import/ Export Wholesale Rare Fish Specialist

For our customers: the fish have code 422202 on our stocklist. Please note that we exclusively supply the wholesale trade.

Lexicon: Kryptopterus: means "with hidden fin", which refers to the very small dorsal fin in that genus. macrocephalus: means "with a large head".

Common name: Striped Glass Catfish
